

Pericom Imaging Singapore Pte Ltd

ABBYY Cheque Processing Solution was deployed to Rentokil Initial Singapore which process about 200-300 cheques per day. Before the solution was deployed, they have outsourced this service to a provider which charges them 75 cents for each processed cheque, and return them with a XML file to upload into their ERP system.

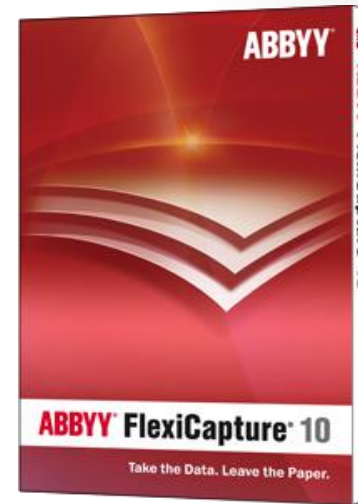

For cost effective measures, they have decided to adopt ABBYY's acclaimed data capture software - ABBYY FlexiCapture. Automatic ICR (intelligent character recognition) solution for hand-printed text of the cheques and built-in validation rules to ensured the exceptional accuracy of data.

All of the form processing cycle stages, such as scanning, recognition, verification, correction and export to a CSV file format or centralised database were supported by ABBYY data capture technology.

With ABBYY FlexiCapture, it reduces the effort for data entry and provides layers of checks to the end user to ensure data consistency and accuracy.

Customer is happy with the end product and have been using it since mid 2015.
